The Problem

- When embedding audio or video files in the "Text and Media area" of the Feedback activity in Moodle, the media files appear correctly in the preview.
- The embedded audio or video file disappears from the view after saving the Feedback activity.
- This issue affects the usability of the Feedback activity, as it prevents users from incorporating multimedia content effectively.

The Solution

The media element in the Feedback activity has the class `vjs-fluid`, which, according to its documentation, "will scale to fit its container." However, the parent container did not have an assigned size. We resolved this by setting:

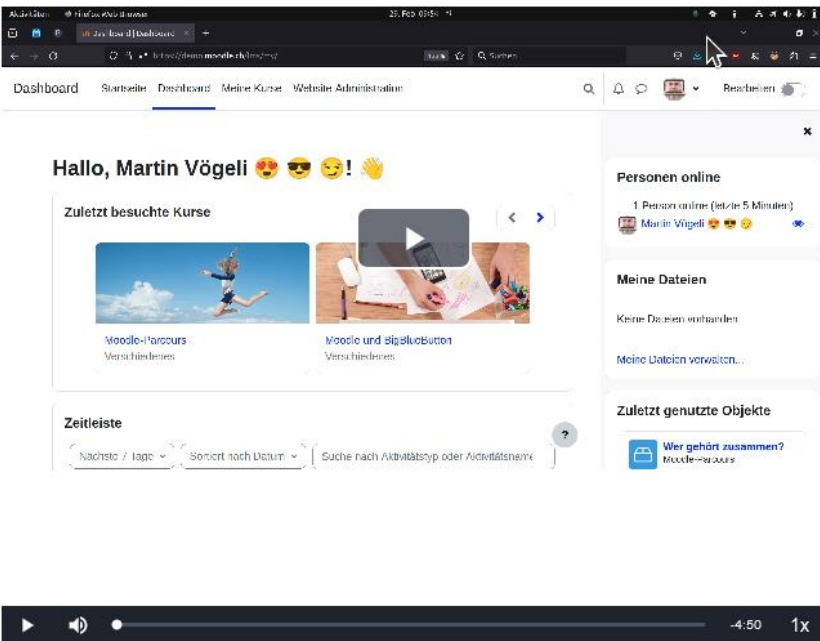

```
48 + .path-mod-feedback .feedback-item-label {  
49 +     width: 100%;  
50 + }  
51 +
```

This ensures the media element scales correctly within its parent container.

In Moodle 4.3 and 4.4, we needed to make this adjustment in the `style.css` file located in `mod/feedback`. For Moodle 4.5, this change was made in the `modules.scss` file under `theme/boost/scss/moodle/`. After that, we needed to run `>grunt css` to build the css files.

Process from Ticket Creation to Upcoming Moodle Patch

1
We created a bug ticket in the Moodle Tracker: MDL-82995.

2
Made and committed the necessary changes for Moodle 4.3, 4.4, and 4.5 (main) branches.

3
Ticket underwent a peer review, CiBot check, and an external review.

DANKE

A photograph of two women sitting at a table. The woman on the left has long dark hair and is smiling broadly. The woman on the right has short grey hair and is also smiling, holding two bags of snacks. The background is a plain white wall. There are some decorative elements: a purple dotted line on the left side, a rainbow and stars in the bottom right corner, and a white cloud-like shape in the bottom right corner.

★ Big shoutout to Sara and Amaia!
Your amazing support has been like a
burst of sunshine on a rainy day! Can't
thank you enough for being the
fabulous stars in our corner! 🌈 ✨
