

Improvements to language customisation

Intention | Pitched idea

As an administrator

I would like to be able to use a texteditor and do bulk actions when using the language customisation

to be more flexible in dealing with customised langstrings in my instance of Moodle.

Origin behaviour

- You only can edit customisations step by step.
- There's no option to delete existing customisation in an easy way.
- Bulk editing is not possible.
- The use of plain-text only is possible.

Current version of the plugin

Filter strings

Show strings of these components

core

- moodle.php
- access.php
- admin.php
- adminpresets.php
- analytics.php
- antivirus.php

Customised only

Help only

Modified in this session only

Only strings containing

String identifier

Show strings

1 2 3 4 5 6 7 8 9 10 ... 24 »

Apply changes and continue editing Save changes to the language pack

Component	String	Standard text	Local customisation
core	abouttobeinstalled	about to be installed	<input type="text"/>
core	accept	Accept	<input type="text"/>
core	action	Action	<input type="text"/>

Demo

Developed improvements (1)

Filter

Show strings of these components

- core
 - moodle.php
 - access.php
 - admin.php
 - adminpresets.php
 - analytics.php
 - antivirus.php

Customised only

Help only

Modified in this session only

Only strings containing

Feature to search for specific content within strings, to replace it

Search and replace

<input type="checkbox"/>	Component	String	Standard text		
<input type="checkbox"/>	core	adminhelplanguage	For checking and editing the current language pack	<input type="button" value="Copy"/>	<input type="button" value="Edit"/>
<input type="checkbox"/>	core	checklanguage	Check language	<input type="button" value="Copy"/>	<input type="checkbox" value="Use texteditor"/> <input type="button" value="Edit"/>

Single action: Copy+paste the „Standard text“ to „Local customisation“ for individualisation

Single action: switch to use a text editor instead of plain text

Single actions: replace content and remove current „Local customisation“

Checkboxes for bulk actions

Developed improvements (2)

Search and replace ?

Search for

Replace with

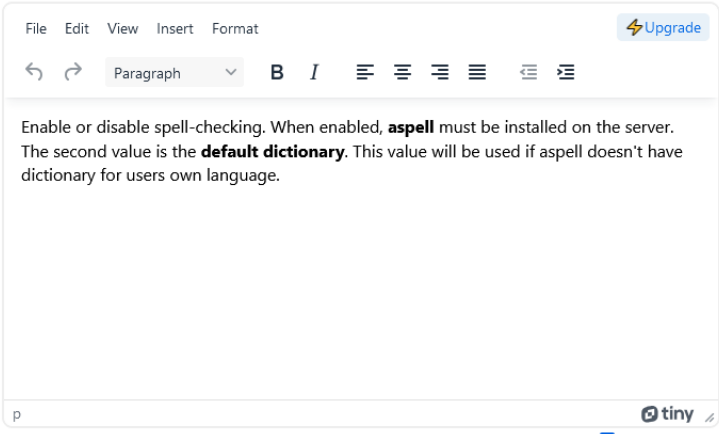

Match whole words only

Match case

Feature to search for specific content within strings, to replace it:

- works with single and bulk actions
- use is independently from the Filter function
- further optional settings

Enable or disable spell-checking. When enabled, `aspell` must be installed on the server. The second value is the `default dictionary`. This value will be used if aspell doesn't have dictionary for users own language.

Use texteditor

Single action: switch to use a text editor instead of plain text:

- much more easy editing of text (especially with html-tags)

Developed improvements (3)

<input checked="" type="checkbox"/> Component	String	Standard text
<input checked="" type="checkbox"/> core	adminhelplanguage	For checking and current language
<input checked="" type="checkbox"/> core	comparelanguage	Compare and ed language
<input checked="" type="checkbox"/> core		Current language

With selected ...

- Select ...
- Replace search term
- Remove customisation
- Copy and paste standard text to customisation

Bulk actions for multiple editing of customisations:

- **Replace content**
- **Remove selected „Local customisation“**
- **Copy+paste the „Standard text“ to „Local customisation“**

Planned improvements

- Acceptance tests for automated testing
- Use of text editor with less functionality (for better use)
- Download of selected customisation
